Education

Kalinga Institute of Industrial Technology — Bhubaneshwar, Odisha
Bachelor of Technology in Computer Science and Engineering — *Jul. 2023 – Present,* ***CGPA - 9.18*** *(till 5th sem)*

St. Joseph's College — Prayagraj, Uttar Pradesh
Class 12th, ISC — *Apr. 2023,* ***Percentage - 87.75%***

Personal Projects

Swan Botanicals - A Skin Care Brand Website | *HTML, CSS, JavaScript, React, TailwindCSS* *(live link)*

- Developed a **responsive** web application for Swan Botanicals as part of the Build for Botanicals competition.
- Built features including **product showcase, carousels, and interactive navigation** for better user engagement.
- Collaborated on UI/UX design decisions, ensuring alignment with Swan Botanicals' brand identity.
- Optimized website for mobile responsiveness and accessibility, enhancing usability across devices.

Smart Contact Manager | *Java, Spring boot, TailwindCSS, HTML, Javascript, MySQL* *(github link)*

- Built a full-stack contact management web application in Spring Boot, following **MVC architecture**.
- **Authentication** and **authorization** with **Spring Security** including **OAuth2** login via Google and Github.
- Designed dynamic front-end pages with **Thymeleaf** and TailwindCSS, with support for dark and light mode toggling.
- Enabled users to **add, view, edit and delete** personal contacts, with data securely stored and retrieved using MySQL.

Academic Projects

AutoVal - Used Car Resale Price Estimator | *Python, Flask, scikitlearn, Pandas, joblib, HTML, CSS, JS* *(github link)*

- Collaborated in a **6-member team** to develop a ML-based car price prediction web application using **real-world data**.
- Contributed to **data preprocessing** and **feature engineering**, including handling missing values, outliers etc.
- Worked closely with backend and frontend teams to ensure smooth integration of ML models into a web app.
- Co-authored project **documentation** and supported end-to-end development.

Vehicular Fog Computing (VFC) - Task Offloading Simulator| *Python, Flask, SUMO, HTML, CSS* *(github link)*

- Collaborated in a **4-member** team to develop a VFC simulator for decision-making in transportation systems.
- Worked with the team to integrate priority-based task scheduling and offloading (vehicle, peer, RSU, cloud).
- Developed an interactive Flask-based dashboard for monitoring of metrics, task events, and system performance.
- Contributed to **project coordination**, ensuring smooth collaboration across simulation, and web components.

Technical Skills

Languages: Java, Python, C, SQL, Javascript, HTML, CSS.

Databases: MySQL, PostgreSQL, MongoDB.

Technologies: Spring Boot, React, Nodejs, Flask, TailwindCSS, Pandas, NumPy, scikitlearn.

Developer Tools: Git, Github, VS Code, IntelliJ IDEA, Postman.

Relevant Coursework: Programming in C, OOP in Java, Data Structures, DBMS, OS, Software Engineering, Design and Analysis of Algorithms, Data Mining and Data Warehousing, Web Designing, AI, ML, Cloud Computing.

Achievements & Certifications

- 150+ questions solved on **Leetcode** demonstrating strong DSA fundamentals**.** (profile)
- Certified in Java on **Hackerrank** demonstrating strong fundamentals in programming. (link)
- Participated in 'Build for Botanicals' organized by Swan Botanicals and created a website for them (certificate)
- Got an **SGPA of 9.54** in 4th semester, demonstrating strong knowledge of core CS subjects.
